LAB SUPPLIES AND SOLUTIONS

# END UNCERTAINTY

## Get the right results every time with Agilent Bio-columns!

End uncertainty in monoclonal antibody characterization. The leading blockbuster drugs being developed are biopharmaceuticals with mAbs representing the largest segment.

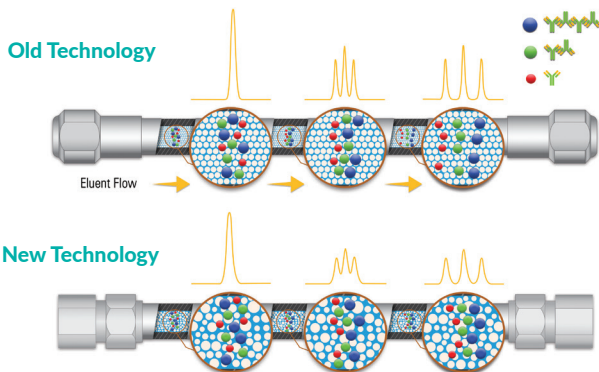

As a researcher in a regulated analytical lab, you can rely on Agilent technology to support biopharma discovery, development, or manufacturing. For consistent results from batch to batch, only Agilent has the technology to deliver every time. The AdvanceBio size exclusion columns (SEC) provides scientists with innovations that no other manufacturer can deliver.

The AdvanceBio SEC columns deliver up to 75% faster runs with shorter column dimensions. Maximize your time and receive savings in labor, mobile phase, and redevelopment costs. Ensure high resolution and accurate quantification by switching from traditional diol SEC columns to Agilent AdvanceBio SEC columns.

### Highlights of AdvanceBio SEC columns

- Large molecule support analysis of mABS, peptide mapping, and glycan analysis
- Increased analytical speed to help you meet deadlines
- Increased resolution for more accurate quantification
- Increased reproducibility to eliminate rework

Neta Scientific is your authorized distributor of Agilent HPLC and AdvanceBio columns. Our company is one of the leading distributors of life science and chromatography products with an extensive catalog of leading brands. We are a minority as well as woman owned business, possessing a variety of diversity certifications that help companies go above the expected.
